

Fejmert[®]
MADE IN SWEDEN

Standard dimensions of the panels are 500 x 500 mm and with a thickness of 50 mm. The hardness can be selected between 50–95 ° Shore.

The panels can be mounted easily and quickly using the screws/pins on the back

This PUCEST[®] -Buffer plate work in such way that parts of the transported material bounce on the plate and some are collected in the pockets, thereby creating a buffer function. The wear effect is reduced substantially.

Another advantage obtained by the elasticity of the plate is that rough large material (eg gravel) doesn't split the plate on impact.

The use of PUCEST[®] -Buffer plates are recommended to grain size up to 32 mm.

PUCEST[®] BUFFER PLATES

Pocket buffer
